## Project 2

Store Management System

### **User Stories**

As a user, I want to add a new product or update a current product in the system.

As a user, I want to add a new customer or update a current customer in the system.

As a user, I want to add a new purchase or update a current purchase in the system.

Task 1: Rewrite two common use cases for each user story. Sketch the screens the system should display in each use case.

### **Use Cases**

Action	Regular Cases	Irregular Case
Add/Update a Product	All required fields are filled correctly and of correct type.	Values are of the incorrect type or required field (id) is not filled.
Add/Update a Customer	All required fields are filled correctly and of correct type.	Values are of the incorrect type or required field (id) is not filled.
Add/Update a Purchase	All required fields are filled correctly and of correct type.	Values are of the incorrect type or required field (id) is not filled.

## UI: Add/Update Product

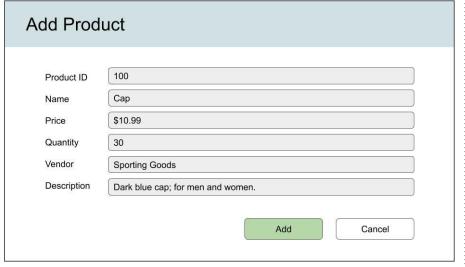

Design UI and write use case for "add or update a product in the system".

#### 1. **Actor** selects Add Product

### 2. System displays Add Product Screen

			Add Product
Add Product	Customers	New Sale	Product ID  Name  Price  Quantity  Vendor
			Description Add Cancel

## 3. **Actor** adds information & clicks Add button.

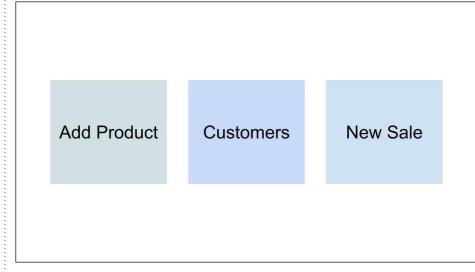

4. **System** hides Add Product screen and shows confirmation.

### 5. Actor clicks on Okay button

## 6. **System** closes pop-up and returns to main screen

# Add Product Customers New Sale

## **Add Product**

Product ID	
Name	
Price	
Quantity	
Vendor	
Description	

Add

Cancel

## **Add Product**

Product ID 100

Name Cap

Price \$10.99

Quantity 30

Vendor Sporting Goods

Description Dark blue cap; for men and women.

Add

Cancel

## New product added successfully!

Okay

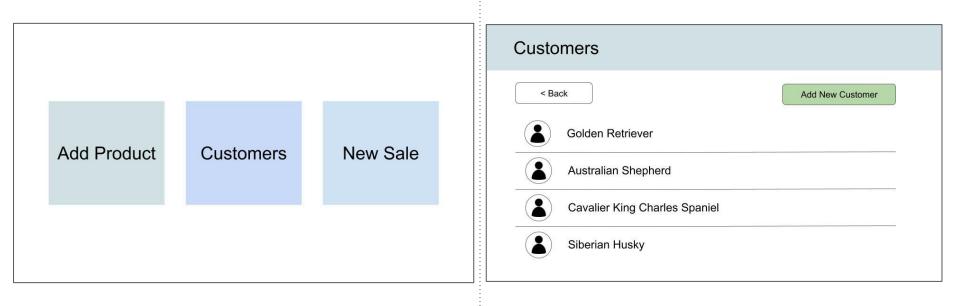

# Add Product Customers New Sale

## UI: Add/Update a Customer

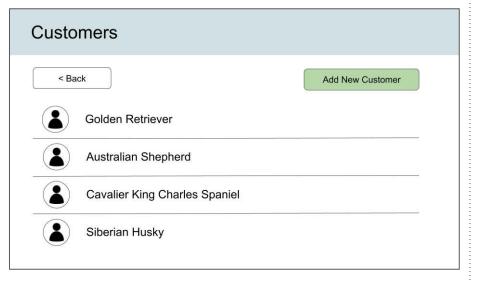

Design UI and write use case for "add or update a customer in the system".

#### 1. Actor selects Customers

### 2. **System** displays list of all customers

#### 3. **Actor** clicks Add New Customer

## 4. **System** shows Add New Customer screen

Add New	Customer			
Customer ID Name				
		Add	Cancel	

## 5. **Actor** adds information & clicks Add button.

6. **System** hides Add Customer screen and shows confirmation.

#### 7. Actor clicks on Okay button

## 8. **System** closes pop-up and shows updated list of customers

# Add Product Customers New Sale

### Customers

< Back

Add New Customer

Golden Retriever

Australian Shepherd

Cavalier King Charles Spaniel

Siberian Husky

## Add New Customer

Customer ID	
Name	

Add

Cancel

## Add New Customer

Customer ID 101

Name Bichon Frise

Add

Cancel

## New customer added successfully!

Okay

# Add Product Customers New Sale

## UI: Add/Update a Purchase

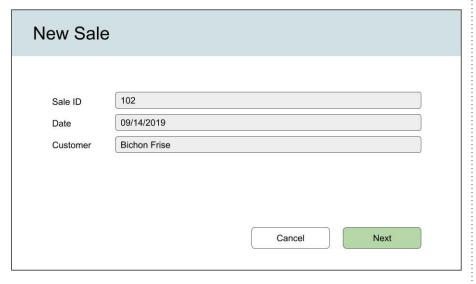

Design UI and write use case for "record or edit a purchase from a customer into the system".

1. Actor selects New Sale

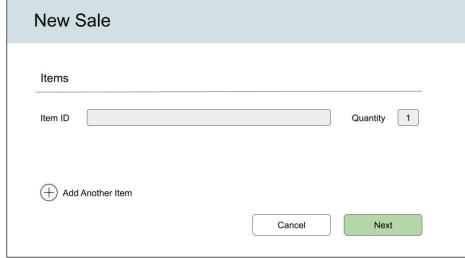

2. **System** displays Add New Sale page

			New Sale	
Add Product	Customers	New Sale	Sale ID Date Customer	Cancel Next

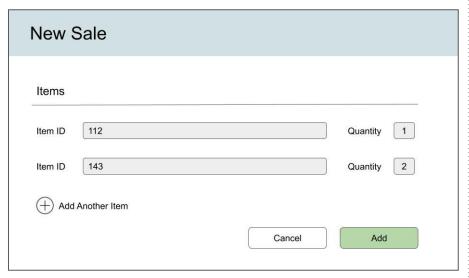

## 3. **Actor** adds basic information & clicks Next button.

4. **System** shows fields to add items.

## 5. **Actor** add items in the sale and clicks add.

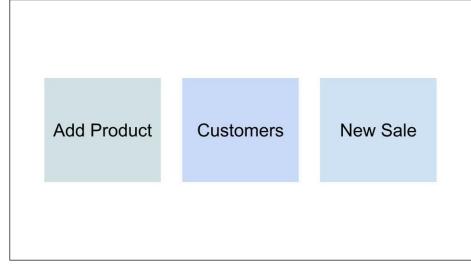

## 6. **System** shows confirmation and hides the New Sale screens

### 7. Actor clicks okay

## 6. **System** takes the user back to the main screen

# Add Product Customers New Sale

Sale ID	
Date	
Customer	

Cancel

Next

Sale ID 102

Date 09/14/2019

Customer Bichon Frise

Cancel

Next

Items

Item ID

Quantity

1

Add Another Item

Cancel

Next

#### Items

Item ID 112

Quantity 1

Item ID

143

Quantity

2

Add Another Item

Cancel

Add

## New sale added successfully!

Okay

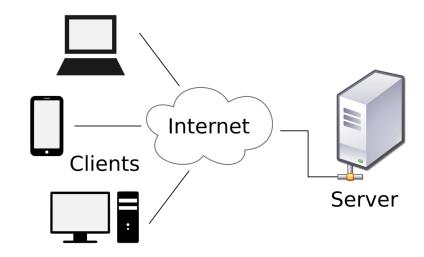

# Add Product Customers New Sale

Task 2: Redesign the Data Access layer at the client side that can load/save data to a remote server component. Describe the protocol.

### Client Side

The client side needs to load and save data to a remote server component.

I am running the GUI locally. The local GUI makes requests to a local SQL server. I am constantly making requests to the database, starting with the login process. Once I am logged in, the user can only view information specific to their account. As the user navigates the application, the client makes requests to the server for the data it needs to show the user.

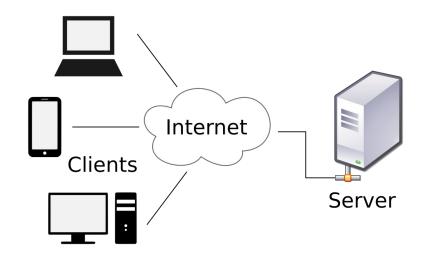

Task 3: Design the server component to perform load/save requests from the Data Access layer at the client side. Describe the protocol.

## Server Side

The client side needs to load and save data to a remote server component.

I am running an instance of a SQLite server locally on my machine. The client makes requests to the server, and the server responds in a way that I can define. For example, if I request to view the purchase history of a specific customer by passing a customerID to the server, the server will return results only for that customer.

# Implementation

Task 4: Implement the system.

https://www.loom.com/share/6590eae 61c7644859430876143037376

**User Story 3** 

<sup>\*</sup> Video is also submitted on canvas.

# Design: User Views

Admins and customers will have different user views.

## Admin View vs Customer View

Design the home main screens for users of Admin and Customer classes.

#### An Admin user can:

- setup the system configuration
- add a new user
- delete an existing user

#### A Customer user can:

- make a new purchase
- view the list of his/her purchases
- cancel an existing purchase

## **Use Cases**

Actor	Action
Admin	setup the system configuration
Admin	add a new user
Admin	delete an existing user
Customer	make a new purchase
Customer	view the list of his/her purchases
Customer	cancel an existing purchase

Admin Home Page

Set System Configuration

Add a New User Delete an Existing User

# Customer Home Page

Make a New Purchase

View Past Purchases Cancel a Purchase

# Thank you!
